

Red Hook Harbor Lines

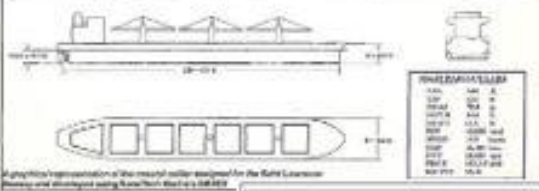

Objective

To give participants insight into a unified approach to research, design, finance and development of commercial marine management projects. Techniques used in this course have been applied in ventures ranging from computer lottery operations to deep-sea bulk and liner services.

Course Outline

- Elements of the business plan.
- Market analysis.
- Technology assessment.
- Operating plan.
- Capital formation.
- Future trends.

Innovations

A complete management empowerment tool
BSDS measures the trade-off

BSDS (Business System Design System) is a complete management empowerment tool that measures the trade-off between cost and performance. It is a powerful tool for decision-making in the design process. The tool is based on a set of 100+ parameters that are used to evaluate the performance of a design. The tool is used to compare different design options and to select the best option. The tool is used to measure the trade-off between cost and performance. The tool is used to measure the trade-off between cost and performance. The tool is used to measure the trade-off between cost and performance.
